

THE SUPERPOWER BREAKDOWN

Claude doesn't need to be hired. It needs the **right access** and the **right skills**.

"System-wide access" means one thing, concretely: a token from [Meta Business Manager](#) scoped to your ad account — not a login, not a password. Once Claude has that, here's what it can actually do **today**, for free, with no custom build.

1. Access

A token scoped to your ad account -- not a login, not a password.

2. Skills

The analysis running today, free, against data you give it.

3. Judgement

Every skill ends in a decision a human still makes.

SKILLS THAT WORK RIGHT NOW

meta-ads-audit

Full account read: creative fatigue, audience overlap, scaling gaps, iOS tracking issues.

account-structure-review

Checks your campaign/ad-set structure against your actual goal and budget -- flags over- and under-segmentation.

audience-overlap-analysis

Finds ad sets quietly bidding against each other in the same auction.

creative-fatigue-detection

Frequency, CTR decay and CPM drift -- which ads need rotating before performance visibly drops.

ad-copy-variant-generator

Reads what's already working in your top ads and writes new variants in the same pattern.

budget-scenario-planner

Models what a spend change actually does to CPA/ROAS before you make it.

anomaly-detection

Flags a CPC spike or CVR drop within hours instead of days.

wasted-spend-finder

Surfaces the line items quietly burning budget for nothing.

HOW TO ACTUALLY START

STEP 1

Get the access

Meta Business Manager → System Users → create a token scoped to your ad account. This is the same credential the account itself uses when it calls Meta's API directly -- nothing exotic.

STEP 2

Give it to Claude

Paste an export of your account (or connect a read-only view) and name the skill you want -- 'run a meta-ads-audit on this account'. No install step beyond having Claude Code or claude.ai with the right skills enabled.

STEP 3

Read the output, act on it

Every skill above ends in a decision a human still makes -- which ad to kill, which budget to move. That's the honest part: this replaces the analysis, not the judgement.

On the exact skill pack: a few different, unverified community repos claim to do this same thing, and they'd be getting a token to your live ad account. Rather than point you at one blind, reply "SUPERPOWER" again and I'll send the specific one I actually use.

THE HONEST PART

What the video showed that isn't a free install.

What's in the video goes one step further than the list on the previous page: Claude creating the campaign itself, a report that lands on its own every day, a WhatsApp reply sent without anyone opening the account. That part isn't a skill you install — it's a direct integration against Meta's own Marketing API (a System User token, and code that calls it), the same thing built for a real, live Aimers International campaign. That's genuine engineering work, not a checkbox, and it's exactly the kind of build Amnicent does for clients who want to go past the audit stage.

The screenshot shows the Meta Marketing API documentation page. The header includes the Meta logo and navigation links: Build with us, Docs, Blog, Resources, and Developer centers. A search bar and a login link are also present. The main content area is titled 'Marketing API' and describes it as a collection of Graph API endpoints and other features for advertising across Meta technologies. A sidebar on the left shows 'Ads and Commerce' with a filter and an overview section. The bottom of the page mentions 'developers.facebook.com' and provides a link to 'See the docs'.

EVERY LINK IN THIS DOCUMENT

Claude Code — skills & plugins

the official docs on how skills get added

code.claude.com/docs/en/plugin-marketplaces

Want that build, not just the audit?

This is what Amnicent actually does — the same Marketing-API work already running for Aimers International's live campaign.
